I strongly support Montana Senate Bill SB428, which will require health plans in Montana to cover the patient care costs of high-quality clinical trials. Clinical trials are an essential part of building a better, more effective, and more efficient health care system. For many patients, they are also the best form of treatment available.

SB428 will ensure that patients can make their treatment decisions based on what is best for them medically, without the fear of lack of insurance coverage for care in a clinical trial. SB428 protects the interests of cancer patients and others with serious, life-threatening illnesses, without raising health care costs for plans or premiums for employers and consumers.

I urge the legislature to pass, and the governor to sign into law, this important protection for our health care system.
